Introduction	xi
Part 1. General Topology	
Chapter I. Structures and Spaces	3
1. Set-Theoretic Digression: Sets	3
2. Topology on a Set	11
3. Bases	16
4. Metric Spaces	18
5. Subspaces	27
6. Position of a Point with Respect to a Set	29
7. Ordered Sets	35
8. Cyclic Orders	42
Chapter II. Continuity	45
9. Set-Theoretic Digression: Maps	45
10. Continuous Maps	49
11. Homeomorphisms	57
Chapter III. Topological Properties	67
12. Connectedness	67
13. Application of Connectedness	73
14. Path Connectedness	76
15. Separation Axioms	81

16. Countability Axioms	87
17. Compactness	92
18. Sequential Compactness	98
19x. Local Compactness and Paracompactness	101
Chapter IV. Topological Constructions	107
20. Multiplication	107
21. Quotient Spaces	113
22. Zoo of Quotient Spaces	117
23. Projective Spaces	127
24x. Finite Topological Spaces	131
25x. Spaces of Continuous Maps	135
Chapter V. Topological Algebra	139
26x. Generalities on Groups	141
27x. Topological Groups	147
28x. Constructions	151
29x. Actions of Topological Groups	156
Part 2. Elements of Algebraic Topology	
Chapter VI. Fundamental Group	163
30. Homotopy	163
31. Homotopy Properties of Path Multiplication	168
32. Fundamental Group	171
33. The Role of Base Point	176
Chapter VII. Covering Spaces and Calculation of Fundamental Groups	179
34. Covering Spaces	179
35. Theorems on Path Lifting	183
36. Calculation of Fundamental Groups by Using Universal Coverings	185
Chapter VIII. Fundamental Group and Maps	191
37. Induced Homomorphisms and Their First Applications	191
38. Retractions and Fixed Points	197
39. Homotopy Equivalences	200
40. Covering Spaces via Fundamental Groups	205

41x. Classification of Covering Spaces	207
Chapter IX. Cellular Techniques	213
42. Cellular Spaces	213
43x. Topological Properties of Cellular Spaces	220
44. Cellular Constructions	222
45. One-Dimensional Cellular Spaces	225
46. Fundamental Group of a Cellular Space	229
Bibliography	239
Index	241
